## EDUCATION

### Python Back-end Programming DCI - Digital Career Institute GmbH

08/2024 - 08/2025, Germany (Remote)  
Courses

- Accomplished a one-year-full-time training including Python, databases, Django, APIs & AWS.
- Completed multiple small projects and one final group project to apply obtained skills.

### German Language Certificate - B1 Sächsische LehnmbauGruppe

12/2023 - 04/2024,

## WORK EXPERIENCE

### AI-assisted Web Designer www.machbreaker.com

06/2025 - Present,  
Achievements/Tasks

- Design, develop and maintain a responsive, multimedia-rich website for the music artist Mach Breaker, enhancing brand visibility and audience engagement.
- Employ Visual Studio Code's Copilot agent mode to autonomously generate boiler plate code and modify existing code.
- Ensure cross-device compatibility and fast load times through optimized HTML structure, preloaded fonts and lightweight CSS styling.
- Utilize generative AI to create select design assets and adapt open-source 3D imaging tools in Spline to develop custom webpage visuals.
- Integrate third-party music platforms (Spotify, Apple Music, SoundCloud, YouTube Music) and social media links to centralize fan access and increase streaming traffic.

### Baker Backstein - Bäckerei für zeitgenössisches Brot

07/2020 - 09/2023, Leipzig, DE  
Achievements/Tasks

- Prepared and baked a variety of breads and pastries using traditional artisanal techniques.
- Collaborated with a team to develop new recipes and improve existing ones.
- Assisted with inventory management and minimizing waste.

### Bartender Whole Foods

03/2017 - 04/2019, California, USA  
Achievements/Tasks

- Served a diverse selection of craft beers and wines, providing recommendations based on customer preferences.
- Engaged with customers to create a welcoming atmosphere and enhance their overall experience.
- Handled cash and credit transactions accurately.

## SKILLS

Python

SQL (Postgres)

Django

Object Oriented Programming

Rest API

Cloud Services (AWS)

Unittest

Github

HTML

CSS

VS Code

Linux

Mac

Adobe Suite

Agentic AI

Generative AI

## PROJECTS

### Bitamin - Nutrient Tracking Web App (Final Project) (2025)

- Designed a nutrient tracking web app with a responsive, accessible interface. Built the frontend with HTML, CSS, and JavaScript, adding light/dark mode and animations, and integrated it with a Django REST API for secure authentication and session handling.

### Music Quiz App (2025)

- Developed a Python-based command-line music quiz with a PostgreSQL database. Added features for genre-based quizzes and custom question banks. Organized the project into clear components for quiz logic, user interaction and data storage.

### Inventory Management System(Group Project) (2024)

- Created a Python-based inventory system with a Tkinter interface, product categories and JSON data storage. Implemented user login and tested features with pytest. Learned to structure programs with classes and improve reliability through testing.

### Banking System (2024)

- Created a Python banking project with secure login, multiple account types and JSON data storage. Built features for deposits, withdrawals, interest and admin tools while practicing clean coding, problem solving and structured program design.
